

ECLIPSE AND GEOKEY BRING CONVENIENCE AND SECURITY TO STUDENTS

OVERVIEW

Eclipse on Madison provides student housing to the Tallahassee area, making it the premier location for students wanting to attend Florida State University. Eclipse wanted to give their students a secure, easy, and efficient access control solution, and Geokey was able to help!

Key Metrics

Eclipse on Madison uses Geokey to secure the doors to their student housing community and provide keyless access to their residents.

SOLUTIONS

Geokey was able to meet the needs of Eclipse on Madison by providing an enhanced and efficient smart lock solution that allows them to manage their building at an affordable price. By using Noke and Port hardware to secure their student community, Eclipse is able to provide students with convenient yet secure access.

By turning the phone into the key, Eclipse no longer has to worry about devoting time and resources to cutting and managing physical keys. On top of that, Eclipse has been able to reduce the number of lockouts that occur thanks to students forgetting or misplacing their keys!

Admins are able to take advantage of the Geokey portal to distribute and manage their resident's unique keys remotely. This allows them to track entry data with detailed reporting so that residents know that no one is accessing their space except for them and approved personnel.

BENEFITS

1

Keyless Smart Access

With Geokey, Eclipse residents can access their community with their phones. No more struggling with a ring of keys or getting locked out of their space: Geokey has students covered!

2

Enhanced Management

The Eclipse on Management staff benefits just as much as the students with Geokey's enhanced access management, allowing them to track unit access and get detailed activity reports in case an audit is needed or issues in the building arise.

3

Efficient Security

Students can rest easy at night, knowing their units and community are secured. Thanks to each resident receiving a key unique to their phone and in-depth access tracking, the student knows that only they and approved personnel have access to their space.
